

Adding Video

To add a video to an Agent, click on the Agent tab, then on the icon for the Agent you want to add the video to.

Step 1

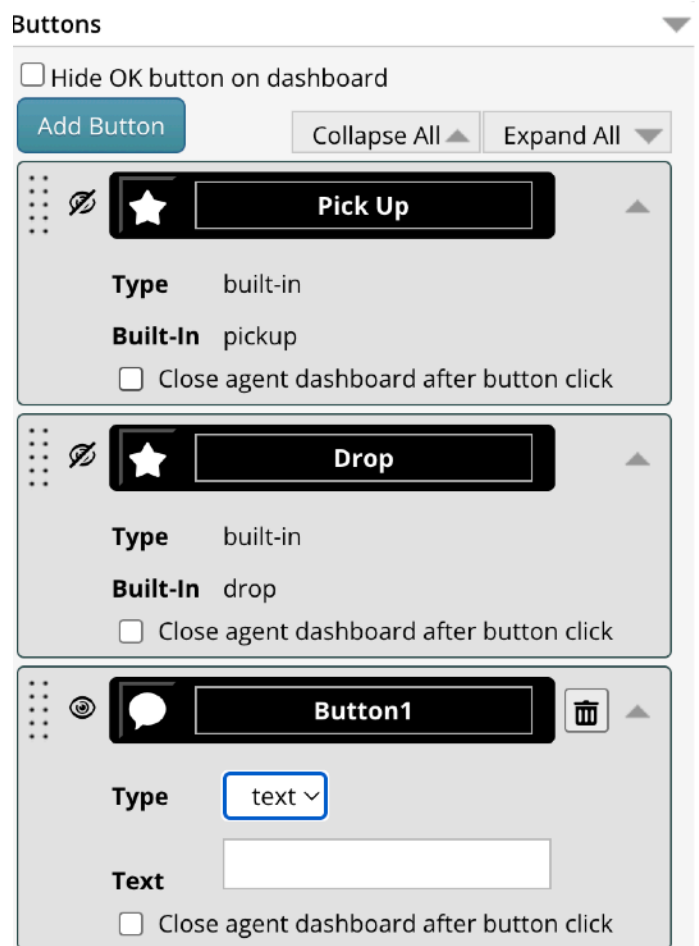

Near the bottom of the Agent dashboard, there's a section called **Buttons**, which will have two buttons to start with, **Pick Up** and **Drop**. Click on the blue button that says **Add Button**.

Step 2

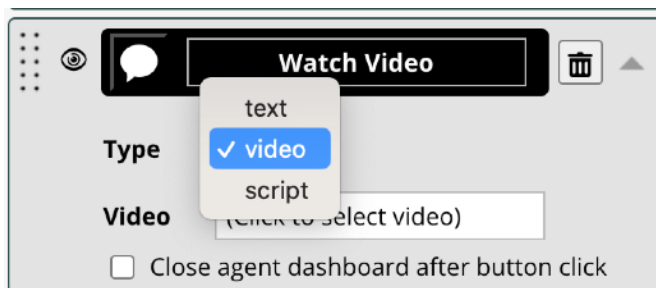

A third button, called **Button 1** will appear at the bottom. If you click on it you can change its name to **Watch Video**.

(This is because TaleBlazer won't play videos automatically, the user has to click a button to play them).

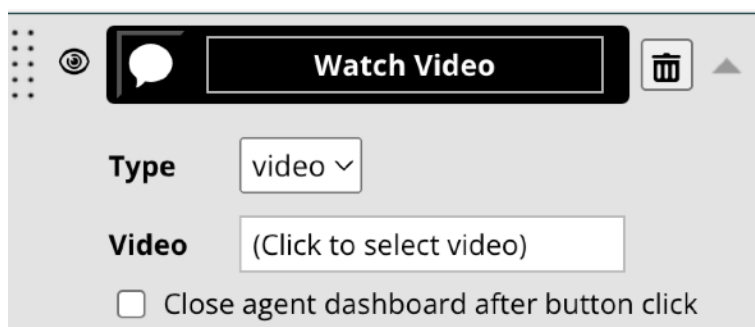

Step 3

Now select **video** from the drop-down **Type** menu.

Step 5

Click where it says (Click to select video). Use the pop-up dialogue window to select the video you want from your computer.

The file must be smaller than 40 MB and suitable file types are mp4, wmv, mpg, mov, 3gp.

Step 5

The **Watch Video** button should now show the name of your uploaded file in the **Video** field.
