Augmented Reality: Dinosaur at the museum

Dippy the dinosaur may have headed back to London but you can get a "live" dinosaur into the museum by scanning this code:

SCAN ME

Your phone will ask you for **permission** to access the **camera and motion sensors.** Click "Allow" and you should be able to see a dinosaur waving its tail in front of you (or possibly to the side - you might need to turn round a bit to find it).

If you take a **screenshot** you should get a photo of the dinosaur looking like it's actually here: possibly about to greet you or your friends….!

If you've got 10 minutes spare and would like to make the dinosaur bigger, smaller, further away, or change it into something else entirely, you can try our **Augmented Reality Coding Activity**
